

# BIRD STOP GEL

An Organic Bird Repellent Gel

## Product Benefits

- Reduce damage to crops and increase harvest revenues
- Save parks, yards, corporate grounds, fields, ponds, turf, etc. from bird damage
- Protect landscaping and property from corrosive droppings
- Reduce health and liability risks associated with pest bird infestation
- Prevent the spread of diseases, such as West Nile, Salmonella and E. Coli
- Increase/maintain property aesthetics
- Decrease nuisance for residents, workers, and customers

**Packing: 20 Kg, 5 Kg & 1 Kg Bucket packing**

## Texture

This is a safe, transparent compound, which is applied to places where pest birds rest, roost or nest. It is nonpoisonous, so it's safe to handle and will not kill birds when used according to directions. Also, because of its unique chemical formulation, this gel will retain its effectiveness for up to one year (under most weather conditions) therefore, birds learn to avoid treated areas and seek new locations for roosting. Many pest control experts recommend Bird Proof Gel as the best way to solve pest bird problems.

# APPLICATION INSTRUCTION

- Surfaces less than 4" wide, apply a ½"- in diameter bead approximately 1" in from the outside edge
- Surfaces greater than 4" but less than 8" wide, apply two beads about 2" apart, beginning approximately 1" in from the outside edge; wider surfaces, apply three beads, with the third bead located about 2" in from the second (5" in from the outside).
- GUTTERS, GUTTER BOXES DOWNSPOUTS: When birds nest in these areas, they clog the natural flow of water which can result in expensive roof and interior water damage. Treat the outermost tip of gutters, laying a continuous ½" bead the full length of the gutter. There should be breaks in the bead to allow water to flow into the gutters. Downspout curves under roof overhangs are occasionally the sites of nests and concentrated droppings. In order to treat the area properly, remove all nests and clean the surface before application. Apply two beads, beginning 1" in from each outside edge.
- MONUMENTS, CURVED SURFACES: Apply where birds have been roosting or are likely to roost.
- SIGNS, MARQUEES, SUBSTRUCTURES & LETTERS: Turn off all electrical current before applying gel to lighted signs. Tar flashing, as well as the rest of the deck, may have to be cleaned thoroughly prior to application (. Apply gel to all supporting beams and braces above and below the sign or marquee; the number of beads (strips) will depend on both the severity of the bird problem and the width of the surfaces
- BELL TOWERS & STEEPLES: Although they vary in shape and size, these areas are treated like any other pitched areas. Hire steeplejacks on an hourly basis to work on ridges and other normally inaccessible areas where rigging and ladders cannot be used. If gutters surround the tower, remove nests and debris and treat the gutters and tops of downspouts
